

Age/Gender : 21Y / Female	Received : 17-Sep-2025 / 14:27 PM
Collected At : LAKSHMI DIAGNOSTICS CENTRE	Report : 17-Sep-2025 / 21:18 PM
Referral Dr : -	Print :
Bed :	Report Status : Preliminary

Biochemistry

Tests	Result	Units	Biological Reference Range	Specimen
KIDNEY FUNCTION TEST				
UREA Method:Urease,UV	12	mg/dl	17.12-49.22	
CREATININE Method:Jaffe	0.73	mg/dl	0.50-0.90	
BLOOD UREA NITROGEN Method:Calculated	5.61	mg/dl	8-23	
URIC ACID Method:Uricase, Colorimetric	3.7	mg/dl	2.6-6.0	
CALCIUM Method:BAPTA	10.0	mg/dl	Children 0-10 days : 7.6-10.4 10days-2years : 9.0-11.0 2-12 years : 8.8-10.8 12-18 years : 8.4-10.2 18-60 years : 8.6-10 60-90 years : 8.8-10.2 >90 years : 8.2-9.6	
PHOSPHORUS Method:Phosphomolybdate	2.8	mg/dl	2.5-4.5	
SODIUM Method:Indirect ISE	148	mmol/L	136-145	
POTASSIUM Method:Indirect ISE	6.0	mmol/L	3.5-5.1	
CHLORIDE Method:Indirect ISE	115	mmol/L	98-107	

Remarks:

Suggested to repeat Potassium with fresh sample in case there is no evident clinical history to rule out pre-analytical errors. Kindly correlate with clinical history and other relevant parameters.

Comments:

Kidneys play several vital roles like filtration/removal of toxic wastes and metabolites from the blood, RBC production, Vitamin D metabolism and regulation of blood pressure. It is recommended in following conditions:

1. To evaluate kidney functioning in normal individuals as screening test
2. To aid in diagnosis of kidney related disorders (Acute and chronic renal failure, pyelonephritis, End Stage Renal Disease)
3. To screen those who may be at risk of developing kidney disorders (Diabetes, Hypertension, Cardiovascular diseases)
4. To monitor someone on treatment for kidney related disorders
5. To monitor effects of nephrotoxic drugs (given for other conditions) on kidneys (Vancomycin, methotrexate, some antivirals etc)

Results of the panel are usually considered together, rather than separately. Individual test result can be abnormal
